

What is Claimed is

1. A software system that allows multiple devices to access the same application session at the same time. The software system handles input received from all devices in response to any given query properly.
2. A software system, as in claim 1, that allows multiple users to access the same session and interact with that session.
3. A software system, as in claim 1, that allows for inputs from devices such as a computer keyboard, a microphone, a phone, or any other input device at the same time while responding with the appropriate outputs.
4. A software system, as in claim 1, that assigns each query a unique identifier, and compares that with the unique identifier returned by each device along with the input provided by the user.
